AI Defense & Autonomous Systems — Portfolio Research Report

Date: February 16, 2026
Prepared by: BigClaw AI Investment Research
Audience: Curtis Biggs, with input from retired Bell Helicopter executives

---

1. Executive Summary — The Thesis

The Pentagon is fundamentally shifting from "few and exquisite" to "many and autonomous."

The U.S. defense budget is approaching **~$1 trillion for FY2026**, with a significant and growing share directed toward:

- **Replicator Initiative** — DoD's program to field thousands of autonomous systems across all domains (air, sea, land, space) within 18-24 months. Initial focus: small autonomous drones in the Pacific to counter China's mass advantage.
- **JADC2 (Joint All-Domain Command & Control)** — AI-powered networking of sensors, shooters, and decision-makers across services.
- **CCA (Collaborative Combat Aircraft)** — Autonomous wingman drones flying alongside manned fighters (F-35, NGAD).
- **FLRAA (Future Long Range Assault Aircraft)** — Bell's V-280 Valor replacing the Black Hawk fleet, with autonomous flight capabilities planned.
- **Counter-UAS** — Massive investment in defeating enemy drones, from $500 hobby drones to sophisticated ISR platforms.

Why this matters now: Ukraine proved that cheap, AI-enabled autonomous systems are the future of warfare. The Pentagon is spending accordingly. This isn't marketing — it's a generational procurement shift.

Investment thesis: Companies that provide the AI software layer, autonomous platforms, and sensor/C2 infrastructure will capture outsized growth. Traditional primes that successfully pivot their massive installed bases toward autonomy will also benefit from the $800B+ existing defense budget while gaining upside from new programs.

---

2. Investment Quality Rankings

Based on fundamentals (valuation, margins, FCF), technicals, and risk assessment:

Rank	Ticker	Price	P/E	Risk	Beta	Rev Growth	Key Strength
1	**NOC**	$702.57	24.2	Low (1)	0.04	+9.6%	B-21 bomber, autonomous systems, lowest risk
2	**RTX**	$200.06	40.3	Low (2)	0.42	+12.1%	Diversified (Pratt, Raytheon, Collins), strong FCF
3	**LDOS**	$176.30	16.5	Low (2)	0.62	+6.7%	Cheapest P/E, pure gov IT/AI, defensive beta
4	**TXT**	$98.09	19.2	Low (2)	0.98	+15.6%	FLRAA/V-280 catalyst, undervalued vs primes
5	**LHX**	$345.50	40.5	Med (3)	0.64	+2.3%	Sensors, EW, space — the "connective tissue" of JADC2
6	**GD**	$347.64	22.5	Med (3)	0.40	+7.8%	Gulfstream + defense, submarine backlog
7	**PLTR**	$131.41	208.6	Med (3)	1.69	+70.0%	Best AI defense platform, but extreme valuation
8	**LMT**	$652.58	~30	Med (4)	0.23	+9.1%	F-35, hypersonics, but margin compression
9	**BAH**	$79.32	11.8	Med (3)	0.35	-10.2%	Cheap, but revenue declining & debt growing
10	**KTOS**	$89.06	685	High (7)	1.09	+26.0%	Best pure-play drone maker, but FCF negative
11	**AVAV**	$243.87	N/A	High (9)	1.24	+150.7%	Switchblade success, but cash burn & debt spike
12	**RCAT**	$11.37	N/A	High (7)	1.35	+646.4%	Explosive growth, but pre-profit, 20% short interest

---

3. Tier Breakdown — Real AI vs. Marketing

Tier 1: Genuine AI/Autonomous Defense Plays

These companies have AI and autonomy as **core to their revenue and strategy**, not a bolt-on:

Ticker	Why It's Real
PLTR	Palantir's Gotham/Maven platforms are literally the AI backbone for DoD battlefield intelligence. AIP (Artificial Intelligence Platform) deployed across multiple combatant commands. 70% revenue growth. The real deal.

Ticker	Why It's Real
KTOS	Builds actual autonomous drones (Valkyrie XQ-58, Firejet). Core to CCA/Replicator. Tactical drone manufacturer, not just integrator.
AVAV	Switchblade loitering munitions proven in Ukraine. Puma ISR drones standard DoD kit. JUMP 20 medium UAS. Real products in combat.
LDOS	Leidos runs DoD's largest IT networks. Digital Modernization segment is pure AI/ML integration for defense. Quiet but real.

Tier 2: Strong AI Pivot — Credible & Investing

These primes are **genuinely transforming**, not just marketing:

Ticker	AI Pivot Assessment
NOC	B-21 has autonomous mission capability. Building autonomous underwater vehicles. IBCS (missile defense C2) is AI-enabled. Most credible prime pivot.
LHX	Sensor fusion, electronic warfare, JADC2 infrastructure. They make the "nervous system" that autonomous systems need. ROGUE-Fires autonomous artillery.
RTX	Raytheon missiles getting AI guidance upgrades. Collins Aerospace avionics for autonomous flight. Pratt engines for CCA drones. Broad AI exposure across segments.
BAH	Consulting/services play — they implement AI for DoD clients. Less product, more advisory. Legitimate but services margins.

Tier 3: Traditional Defense with AI Upside

Solid defense businesses where AI is additive but not transformational yet:

Ticker	Assessment
LMT	F-35 is a huge cash cow. CCA wingman programs (Skunk Works) are real but early. AARGM-ER smart missiles. AI is coming but LMT is still a traditional prime.
GD	Submarines and Gulfstreams are the business. GDIT (IT segment) does some AI work. Not a primary AI play.
TXT	Bell's V-280 Valor is partially autonomous-capable. Bell 525 Relentless. But Textron is diversified (Cessna, industrial). AI is one piece.

Tier 4: Speculative

Ticker	Assessment
RCAT	Teal drones getting DoD orders. Explosive revenue growth (646%) but from tiny base. Pre-profit, 20% short interest. High-risk/high-reward lottery ticket.

4. Recommended $100K Portfolio Allocation

Target Allocation: 40% AI/Autonomous + 40% AI-Pivoting Primes + 10% Speculative + 10% Cash

Ticker	Category	Allocation	Amount	Shares (approx)	Rationale
PLTR	AI Software	10%	$10,000	~76	Best-in-class AI platform; already held in Innovation Fund, smaller position here
KTOS	Autonomous	12%	$12,000	~134	Pure-play drone manufacturer, CCA/Replicator exposure
AVAV	Autonomous	10%	$10,000	~41	Combat-proven UAS, Switchblade demand
LDOS	AI Services	8%	$8,000	~45	Cheapest valuation, low beta, steady gov IT/AI
LHX	Sensors/C2	8%	$8,000	~23	JADC2 infrastructure, EW dominance
RTX	Prime/AI	12%	$12,000	~60	Diversified defense giant, strong AI pivot
NOC	Prime/AI	12%	$12,000	~17	Lowest risk, B-21, autonomous systems
LMT	Prime	10%	$10,000	~15	F-35 cash cow, CCA upside
GD	Prime	5%	$5,000	~14	Submarine backlog, Gulfstream hedge
TXT	Prime	5%	$5,000	~51	FLRAA catalyst, Bell Helicopter heritage
BAH	AI Services	3%	$3,000	~38	Cheap AI services play, smaller conviction
RCAT	Watchlist	0%	$0	0	Too speculative for initial build — monitor
Cash	Reserve	5%	$5,000	—	Dry powder for dips or adding RCAT
		100%	**$100,000**		

Portfolio Characteristics

- **Weighted Beta:** ~0.65 (defensive)
- **Dividend Yield:** ~1.2% (weighted avg)
- **Sector:** 100% Defense/Aerospace (concentrated by design)
- **Geographic:** 100% U.S. (NATO allies could diversify)

5. Bell Helicopter / Textron Deep Dive (TXT)

Special section for our Bell Helicopter consultants

Company Overview

- **Price:** $98.09 | **P/E:** 19.2 | **Rev Growth:** +15.6% | **Risk:** Low (2)
- **Beta:** 0.98 | **Gross Margin:** 18% | **Op Margin:** 7.4%
- Textron is diversified: Bell (helicopters/tiltrotors), Textron Aviation (Cessna/Beechcraft), Textron Systems (drones/armored vehicles), Industrial

FLRAA Program — V-280 Valor

- **Contract:** Bell won the $1.3B EMD contract in Dec 2022 over Sikorsky/Boeing Defiant X
- **Program Value:** Estimated $70-80B over lifecycle for 1,000+ aircraft replacing UH-60 Black Hawk
- **Status:** Engineering & Manufacturing Development phase. First flight testing ongoing at Amarillo facility.
- **Key Risk:** Sikorsky protested the award (resolved in Bell's favor). Budget sequestration could delay full-rate production.
- **Autonomous Capability:** V-280 designed with optionally-piloted capability from the start. Fly-by-wire system enables autonomous flight modes.
- **Timeline:** Low-Rate Initial Production (LRIP) expected ~2028-2029. Full operational capability 2030+.

FARA Cancellation Impact

- Army cancelled the FARA (Future Attack Reconnaissance Aircraft) program in Feb 2024
- Bell's 360 Invictus was competing. Cancellation freed up budget for other priorities (drones, FLRAA)
- **Net impact on Bell:** Mixed. Lost a potential program but FLRAA became even more critical.

Supply Chain Considerations (for our consultants)

- **Amarillo facility** remains primary Bell manufacturing hub
- **GE T901 engine** (Improved Turbine Engine Program) — new engine for both V-280 and upgraded Black Hawks
- **Composites supply chain** — V-280 uses extensive composite structures; supply chain is different from traditional metal airframes
- **Tiltrotor complexity** — V-280 is simpler than V-22 Osprey (no wing rotation) but still complex drive train
- **Workforce transition** — Amarillo workforce needs to transition from Black Hawk production knowledge to tiltrotor manufacturing

What Bell Insiders Would Know

- Production rate ramp challenges (Bell's history with V-22 ramp)
- Quality control differences between tiltrotor and conventional helicopter manufacturing

- Supply chain single points of failure (specific vendors for critical tiltrotor components)
- Cultural readiness at Bell for the FLRAA transition
- Subcontractor health (who's struggling, who's performing)

Textron Broader Business

- **Textron Aviation:** Cessna Citation jets, Beechcraft turboprops — strong business jet demand
- **Textron Systems:** Shadow/Aerosonde drones, RIPSAW unmanned ground vehicle, Ship-to-Shore Connector
- **Industrial:** Specialized vehicles, fuel systems — steady but boring

---

6. Key Risks

Macro/Political Risks

Risk	Probability	Impact	Notes
Budget Sequestration	Low-Medium	Severe	If debt ceiling fights return, automatic defense cuts could hit. Current bipartisan support for defense spending is strong but not guaranteed.
Administration Change (2028)	Medium	Medium	Defense priorities shift with administrations. Current emphasis on Pacific/China could shift.
DOGE/Efficiency Cuts	Medium	Medium	Government efficiency initiatives could target procurement overhead, affecting services companies (BAH, LDOS) more than hardware.
Debt Ceiling Crisis	Low	Severe	Government shutdown risk → delayed payments to contractors → cash flow disruption

Program-Specific Risks

Risk	Affected Tickers	Notes
FLRAA delay/cancellation	TXT	Low probability (Army's #1 aviation priority) but any delay impacts Textron significantly
CCA program restructure	KTOS, LMT	Still in prototype phase. Requirements could change.
Replicator funding continuity	KTOS, AVAV, RCAT	Initiative could lose momentum with leadership changes
F-35 sustainment costs	LMT	Ongoing political scrutiny of per-flight-hour costs

Risk	Affected Tickers	Notes
B-21 cost overruns	NOC	Fixed-price contract means NOC eats overruns

Sector Risks

- **Concentration:** This portfolio is 100% defense. Any broad defense downturn hits everything.
- **Valuation stretch:** PLTR at 208x P/E, KTOS at 685x — these are priced for perfection.
- **Insider selling:** Every single ticker shows net insider selling. Common in defense (exec comp heavy on stock), but notable.
- **Interest rates:** Higher-for-longer rates hurt high-growth/no-profit names (KTOS, AVAV, RCAT) more than cash-flowing primes.

---

7. Questions for the Consultants

Specific questions where retired Bell Helicopter expertise adds unique value:

For the Director (Major Project Planning & Supply Chain)

1. **V-280 Supply Chain Health:** "Which V-280 Valor suppliers are you most concerned about? Are there single-source components that could bottleneck production?"

2. **Tiltrotor Manufacturing Readiness:** "How does Bell's manufacturing readiness for V-280 compare to where V-22 was at the same program stage? What lessons were learned?"

3. **Amarillo Workforce:** "Does Bell's Amarillo workforce have the skills for composite-heavy tiltrotor production, or is there a significant retraining need?"

4. **GE T901 Engine Integration:** "How confident are you in the T901 engine supply chain? Is GE Aviation's capacity adequate for both V-280 and Black Hawk re-engine programs?"

5. **Program Timeline Reality:** "Based on your experience with Bell program timelines, is the 2028-2029 LRIP target realistic, or should we expect 2-3 year delays?"

6. **Subcontractor Assessment:** "Which defense primes are the best and worst to work with as a subcontractor? Any that consistently cause supply chain problems?"

For the QA Manager

1. **Quality Culture Comparison:** "How would you compare Bell's quality culture to other defense manufacturers you've interacted with (Sikorsky, Boeing, Lockheed)?"

2. **V-280 vs V-22 Quality Lessons:** "The V-22 had significant quality issues in early production. What systemic changes has Bell made since then?"

3. **DCMA Relationship:** "How is Bell's relationship with DCMA (Defense Contract Management Agency) inspectors? Any recurring audit findings?"

4. **Digital Quality Systems:** "Is Bell adopting digital thread/model-based quality inspection, or still largely paper-based? How does this compare to industry?"

5. **Foreign Object Debris (FOD) Culture:** "How rigorous is Bell's FOD prevention compared to what you've seen at other facilities?"

General Industry Questions

1. **Contractor Culture Rankings:** "If you had to rank the major defense primes on engineering culture and ability to execute, how would you order them?"

2. **Autonomous Systems Readiness:** "From your experience, how ready is Bell (and the broader defense industrial base) to actually manufacture autonomous systems at scale?"

3. **DOGE Impact:** "How worried should we be about government efficiency reviews impacting defense procurement timelines and contractor payments?"

4. **Investment Perspective:** "If you were investing $100K in defense stocks today, knowing what you know about the industry from the inside, what would you do differently than what we've proposed?"

Appendix: Individual Stock Analysis Summaries

PLTR — Palantir Technologies ($131.41)

- **P/E:** 208.6 | **P/S:** 70.0 | **Gross Margin:** 82.4% | **Rev Growth:** +70%
- **Risk:** Medium (3) | **Beta:** 1.69
- **Bull:** Best AI platform in defense. AIP adoption accelerating. Gov + commercial growth.
- **Bear:** Extreme valuation. Insider selling. Beta of 1.69 means violent swings.
- **Verdict:** Own it, but size appropriately. The platform is real but the price assumes perfection.

LDOS — Leidos ($176.30)

- **P/E:** 16.5 | **P/S:** 1.3 | **Gross Margin:** 17.6% | **Rev Growth:** +6.7%
- **Risk:** Low (2) | **Beta:** 0.62
- **Bull:** Cheapest P/E in the group. Defensive beta. Digital modernization contracts.
- **Bear:** Low margins, slow growth. Government services commodity risk.
- **Verdict:** Boring but solid. The value pick in the portfolio.

BAH — Booz Allen Hamilton ($79.32)

- **P/E:** 11.8 | **P/S:** 0.9 | **Gross Margin:** 22.4% | **Rev Growth:** -10.2%

- **Risk:** Medium (3) | **Beta:** 0.35
- **Bull:** Extremely cheap. AI consulting leader. CEO buying stock.
- **Bear:** Revenue declining. Debt growing faster than revenue. 8% short interest.
- **Verdict:** Value trap or turnaround? Small position until revenue stabilizes.

KTOS — Kratos Defense ($89.06)

- **P/E:** 685 | **P/S:** 11.8 | **Gross Margin:** 22.9% | **Rev Growth:** +26%
- **Risk:** High (7) | **Beta:** 1.09
- **Bull:** Best pure-play autonomous drone manufacturer. CCA/Replicator core beneficiary. FCF turning positive.
- **Bear:** Negative OCF/NI ratio. Insiders dumping 28% of holdings. Valued for 2030 success today.
- **Verdict:** High conviction on the business, not on the valuation. Must own for drone thesis.

AVAV — AeroVironment ($243.87)

- **P/E:** N/A (losses) | **P/S:** 8.9 | **Gross Margin:** 26.8% | **Rev Growth:** +150.7%
- **Risk:** High (9) | **Beta:** 1.24
- **Bull:** Switchblade combat-proven. Revenue up 150%. Ukraine + Pacific demand.
- **Bear:** Highest risk score (9). Debt up 2916%. Cash runway 7.4 months. FCF deeply negative.
- **Verdict:** Great products, terrible balance sheet. Growth is consuming all cash. Watch carefully.

RCAT — Red Cat Holdings ($11.37)

- **P/E:** N/A | **P/S:** 182 | **Gross Margin:** -38.5% | **Rev Growth:** +646%
- **Risk:** High (7) | **Beta:** 1.35
- **Bull:** Teal drones winning DoD short-range recon contracts. Explosive growth.
- **Bear:** Negative gross margins. 20% short interest. Pre-revenue startup masquerading as defense company.
- **Verdict:** Watchlist only. Revisit if gross margins turn positive.

LHX — L3Harris Technologies ($345.50)

- **P/E:** 40.5 | **P/S:** 3.0 | **Gross Margin:** 25.7% | **Rev Growth:** +2.3%
- **Risk:** Medium (3) | **Beta:** 0.64
- **Bull:** Sensor fusion, EW, space. The "connective tissue" for autonomous systems. ROGUE-Fires.
- **Bear:** Slow revenue growth. Integration still ongoing from L3-Harris merger.
- **Verdict:** Essential infrastructure play. Boring in the best way.

RTX — Raytheon Technologies ($200.06)

- **P/E:** 40.3 | **P/S:** 3.0 | **Gross Margin:** 20.1% | **Rev Growth:** +12.1%
- **Risk:** Low (2) | **Beta:** 0.42

- **Bull:** Most diversified defense company. Pratt engines, Raytheon missiles, Collins avionics. Strong FCF.
- **Bear:** GTF engine powder metal issue still lingering. Complex conglomerate.
- **Verdict:** Core holding. Best risk/reward among primes.

NOC — Northrop Grumman ($702.57)

- **P/E:** 24.2 | **P/S:** 2.4 | **Gross Margin:** 19.8% | **Rev Growth:** +9.6%
- **Risk:** Low (1) | **Beta:** 0.04
- **Bull:** Lowest risk in the portfolio. B-21 bomber. Sentinel ICBM. IBCS. Most credible AI pivot.
- **Bear:** B-21 fixed-price risk. Low beta means limited upside in risk-on markets.
- **Verdict:** Anchor position. The safest way to play defense AI.

LMT — Lockheed Martin ($652.58)

- **P/E:** ~30 | **P/S:** ~3.0 | **Gross Margin:** 14% | **Rev Growth:** +9.1%
- **Risk:** Medium (4) | **Beta:** 0.23
- **Bull:** F-35 franchise. Skunk Works CCA programs. Hypersonics. Space.
- **Bear:** Margin compression. Customer concentration (U.S. government). F-35 sustainment political risk.
- **Verdict:** Must-own prime. F-35 alone justifies the position.

GD — General Dynamics ($347.64)

- **P/E:** 22.5 | **P/S:** 1.8 | **Gross Margin:** 15.1% | **Rev Growth:** +7.8%
- **Risk:** Medium (3) | **Beta:** 0.40
- **Bull:** Columbia-class submarine (existential program, will be funded). Gulfstream strong.
- **Bear:** Not really an AI play. GDIT is the only tech-forward segment.
- **Verdict:** Small position. Submarine hedge, not an AI investment.

TXT — Textron ($98.09)

- **P/E:** 19.2 | **P/S:** 1.2 | **Gross Margin:** 18.0% | **Rev Growth:** +15.6%
- **Risk:** Low (2) | **Beta:** 0.98
- **Bull:** FLRAA/V-280 is a $70-80B lifecycle program. Cheapest P/S in the group. Diversified revenue.
- **Bear:** Margins compressing. FLRAA delays could push revenue out years. Bell is one segment of many.
- **Verdict:** FLRAA catalyst makes this interesting. Our consultants' expertise is a unique edge here.
